## **DETAILED ACTION**

### ***Drawings***

The drawings are objected to because all blocks in the drawing should be labeled with an appropriate label identifying the element. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

### ***Specification***

The abstract of the disclosure is objected to because it does not contain proper language and is not in the proper format. Correction is required. See MPEP § 608.01(b).

Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

The following guidelines illustrate the preferred layout for the specification of a utility application. These guidelines are suggested for the applicant's use.

### Arrangement of the Specification

As provided in 37 CFR 1.77(b), the specification of a utility application should include the following sections in order. Each of the lettered items should appear in upper case, without underlining or bold type, as a section heading. If no text follows the section heading, the phrase "Not Applicable" should follow the section heading:

- (a) TITLE OF THE INVENTION.
- (b) CROSS-REFERENCE TO RELATED APPLICATIONS.
- (c) STATEMENT REGARDING FEDERALLY SPONSORED RESEARCH OR DEVELOPMENT.
- (d) INCORPORATION-BY-REFERENCE OF MATERIAL SUBMITTED ON A COMPACT DISC (See 37 CFR 1.52(e)(5) and MPEP 608.05. Computer program listings (37 CFR 1.96(c)), "Sequence Listings" (37 CFR 1.821(c)), and tables having more than 50 pages of text are permitted to be submitted on compact discs.) or  
REFERENCE TO A "MICROFICHE APPENDIX" (See MPEP § 608.05(a). "Microfiche Appendices" were accepted by the Office until March 1, 2001.)
- (e) BACKGROUND OF THE INVENTION.
  - (1) Field of the Invention.
  - (2) Description of Related Art including information disclosed under 37 CFR 1.97 and 1.98.
- (f) BRIEF SUMMARY OF THE INVENTION.
- (g) BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWING(S).
- (h) DETAILED DESCRIPTION OF THE INVENTION.
- (i) CLAIM OR CLAIMS (commencing on a separate sheet).
- (j) ABSTRACT OF THE DISCLOSURE (commencing on a separate sheet).
- (k) SEQUENCE LISTING (See MPEP § 2424 and 37 CFR 1.821-1.825. A "Sequence Listing" is required on paper if the application discloses a nucleotide or amino acid sequence as defined in 37 CFR 1.821(a) and if the required "Sequence Listing" is not submitted as an electronic document on compact disc).

A substitute specification in proper idiomatic English and in compliance with 37 CFR 1.52(a) and (b) is required. The substitute specification filed must be accompanied with a statement that it contains no new matter.

***Claim Rejections - 35 USC § 112***

Claims 13-24 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claims are very poorly written. The claims are generally narrative and indefinite, failing to conform to current U.S. practice. They appear to be a literal translation into English from a foreign document and are replete with grammatical and idiomatic errors.

The claims contain numerous problems with setting forth a proper antecedent basis for the claimed elements. To name a few with direction to claim 13: line 1, "The system"; line 2, "the first guidance device"; line 3, "the first mirror"; line 4, "the first and the second actuators"; line 5, "the additions second guidance device"; lines 5-6; "the first and the second subtracting amplifier"; lines 6-7, "the third and fourth actuators"; line 7, "the second mirror"; line 8, "the third and the fourth actuators"; lines 9-10, "the corresponding outputs of the commutation unit", to name few just in claim 13. The remaining claims contain the same problem.

Applicant interchanges, "the" and "a" to the point that it is unclear if an additional element is being claimed or the same element is being discussed, i.e. claim 14, line 2, "a commutation unit". Is this an additional unit or the same one as referenced in claim 13.

Art Unit: 2878

Regarding claim 21, (e.g., aluminium) renders the claim indefinite because it is unclear whether the limitation(s) following the phrase are part of the claimed invention. See MPEP § 2173.05(d).

Further, it is unclear, due to the manner in which the claims are written, how the parts are truly connected and how they function together to light an object. Therefore, a clear understanding of the claims is not provided.

Due to the scope of the claims being so unclear, no art has been applied to the claimed invention at this time. Appropriate correction for the identified problems is required.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Each disclose different types of systems used in guidance and tracking and illumination.
